ROHM Switching Regulator Solutions

Evaluation Board: Synchronous Buck Converter Integrated FET
BD9B301MUV-EVK-101 (3.3 | 3A Output)

Introduction
This application note will provide the steps necessary to operate and evaluate ROHM’s synchronous buck DC/DC converter using the BD9B301MUV-EVK-101 evaluation board. Component selection, board layout recommendations, operating procedures, and application data are provided.

Description
This evaluation board has been specifically developed to evaluate ROHM’s BD9B301MUV synchronous buck DC/DC converter with integrated 32mΩ Pch high-side and Nch low-side MOSFETs. Features include 3.3V output from 2.7V to 5.5V input and variable switching frequency: 1MHz (FREQ pin connected to VIN) or 2MHz (FREQ pin connected to Ground). Multiple protection circuits are also built in, including a fixed soft start circuit that prevents inrush current during startup, UVLO (Under Voltage Lock Out), and TSD (Thermal Shutdown).

An EN pin allows for simple ON/OFF control of the IC to reduce standby current consumption, while a MODE pin enables users to select Fixed Frequency PWM mode or Deep SLLM control that automatically switches between modes.

Applications
• Step-Down Power Supplies for DSPs, FPGAs, Microcontrollers, and more
• Laptop PCs/Tablet PCs/Servers
• LCD TVs
• Storage Devices (HDDs/SSDs)
• Printers, OA Equipment
• Entertainment Devices
• Distributed and Secondary Power Supplies

**Note:**

1. $0.8V = V_{OUT} = 0.8\times V_{IN}$
Board I/O

Below is a reference application circuit that shows the inputs V_IN, Enable, FREQ and MODE and the output V_OUT.

![Application Circuit Diagram]

**Figure 2: BD9B301MUV-EVK-101 Evaluation Board I/O**

**Operating Procedure**

1. Connect the power supply’s GND terminal to GND test point TP3 on the evaluation board.

2. Connect the power supply’s V_CC terminal to V_IN test point TP2 on the evaluation board. This will provide V_IN to the IC U1. Please note that V_CC should be in the range from 2.7V to 5.5V.

3. Set the operating mode by changing the position of shunt jumper J3 (If Pin2 is connected to Pin1, the MODE pin of IC U1 will be pulled high and IC U1 will operate in Fixed frequency PWM mode, otherwise the MODE pin of IC U1 will be pulled low and IC U1 will operate by automatically switching between Deep-SLLM control and fixed frequency PWM mode).

4. Set the switching frequency by changing the position of shunt jumper J2 (If Pin2 is connected to Pin1, the FREQ pin of IC U1 will be pulled high and IC U1 will switch frequency to 1.0MHz, otherwise the FREQ pin of IC U1 will be pulled low and the frequency will be switched to 2.0MHz).

5. Check if shunt jumper J1 is the ON position (Connect Pin 2 to Pin 1, the EN pin of IC U1 is pulled high as a default).

6. Connect the electronic load to TP4 and TP5. Do not turn on the load.

7. Turn on the power supply. The output voltage V_OUT (+3.3V) can be measured at the test point TP4. Now turn on the load. The load can be increased up to 3A MAX.
Reference Application Data

Evaluation Board Layout Guidelines

In the step-down DC/DC converter, a large pulse current flows through two loops. The first loop is the one into which current flows when the High-Side FET is turned ON. The flow starts from the input capacitor $C_{IN}$, runs through the FET, inductor $L$, and output capacitor $C_{OUT}$, then back to the GND of $C_{IN}$ via the GND of $C_{OUT}$. In the second loop current flows when the Low-Side FET is turned on. The flow starts from the Low-Side FET, runs through the inductor $L$ and output capacitor $C_{OUT}$, then back to the GND of the Low-Side FET via the GND of $C_{OUT}$. We recommend routing these two loops as thick and as short as possible to minimize noise and improve efficiency. The input and output capacitors should be connected directly to the GND plane. Please note that the PCB layout has a large influence on the DC/DC converter in terms of heat generation, noise, and efficiency.

Accordingly, when designing the PCB layout please consider the following points.

- Connect an input capacitor as close as possible to the IC PVIN terminal on the same plane as the IC.
- If there is any unused area on the PCB, provide a copper foil plane for the GND node to assist heat dissipation from the IC and the surrounding components.
- Switching nodes such as SW are susceptible to noise due to AC coupling with other nodes. Therefore, route the coil pattern as thick and as short as possible.
- Ensure that lines connected to FB are far from the SW nodes.
- Place the output capacitor away from the input capacitor in order to avoid the effects of harmonic noise from the input.

Power Dissipation

When designing the PCB layout and peripheral circuitry, sufficient consideration must be given to ensure that the power dissipation is within the allowable dissipation curve.

4. IC only $\theta_{JA}= 462.9^\circ C/W$

![Fig 33: Thermal Derating Characteristics](image)
Application Circuit Component Selection

Inductor (L)

The inductance significantly depends on the output ripple current. As shown by following equation, the ripple current decreases as the inductor and/or switching frequency increases.

\[
\Delta I_L = \frac{(V_{IN} - V_{OUT}) \times V_{OUT}}{L \times V_{IN} \times f}
\]

Where \(f\)=Switching Frequency, \(L\)=Inductance, and \(\Delta L\)=Inductor Ripple Current.

As a minimum requirement, the DC current rating of the inductor should be equal to the maximum load current plus half of the inductor ripple current as shown by the equation below.

\[
I_{LPEAK} = I_{OUTMAX} + \frac{\Delta I_L}{2}
\]

Notice

1. The information contained herein is subject to change without notice.

2. Before you use our Products, please contact a sales representative and verify the latest specifications.

3. Although ROHM is continuously working to improve product reliability and quality, semiconductors can break down and malfunction due to various factors. Therefore, in order to prevent personal injury or fire arising from failure, please take safety measures such as complying with the derating characteristics, implementing redundant and fire prevention designs, and utilizing backups and fail-safe procedures. ROHM shall have no responsibility for any damages arising out of the use of our Products beyond the rating specified by ROHM.

4. Examples of application circuits, circuit constants and any other information contained herein are provided only to illustrate the standard usage and operations of the Products. The peripheral conditions must be taken into account when designing circuits for mass production.

5. The technical information specified herein is intended only to show the typical functions and examples of application circuits for the Products. ROHM does not grant you, explicitly or implicitly, any license to use or exercise intellectual property or other rights held by ROHM or any other parties. ROHM shall have no responsibility whatsoever for any dispute arising out of the use of such technical information.

6. The Products specified in this document are not designed to be radiation tolerant.

7. When using our Products in applications requiring a high degree of reliability (as exemplified below), please contact and consult with a ROHM representative: transportation equipment (i.e. cars, ships, trains), primary communication equipment, traffic lights, fire/crime prevention, safety equipment, medical systems, servers, solar cells, and power transmission systems.

8. Do not use our Products in applications requiring extremely high reliability, such as aerospace equipment, nuclear power control systems, and submarine repeaters.

9. ROHM shall bear no responsibility for any damages or injury arising from non-compliance with the recommended usage conditions and specifications contained herein.

10. ROHM has used reasonable care to ensure the accuracy of the information contained in this document. However, ROHM does not warrants that such information is error-free, and ROHM shall have no responsibility for any damages arising from any inaccuracy or misprint of such information.

11. Please use the Products in accordance with any applicable environmental laws and regulations, such as the RoHS Directive. For more details, including RoHS compatibility, please contact a ROHM sales office. ROHM shall bear no responsibility for any damages or losses resulting from non-compliance with any applicable laws or regulations.

12.
